

TIER 0

International

The most capable super-computers in Europe, used by academics and industry.

TIER 1

National

Highest capability and capacity supercomputers in the UK providing the capacity to deliver leading edge science and the capability to develop next generation codes.

TIER 2

Regional

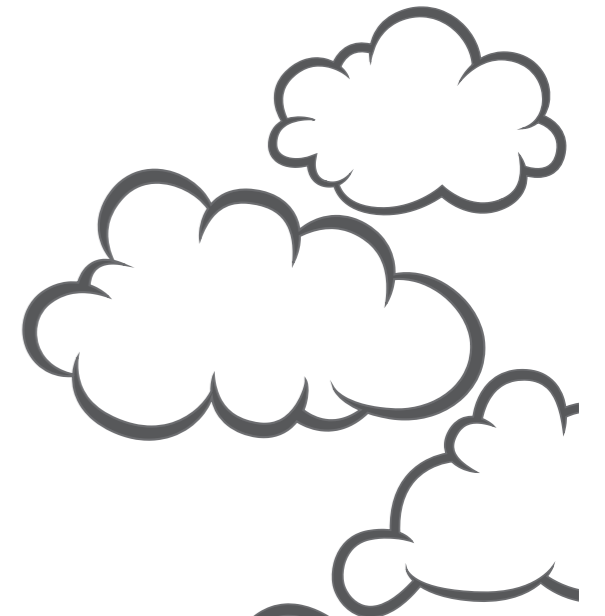

Bridges the gap between local university clusters and the national service. Enables a rapid turnaround in experiments, small compute runs. Also enables proof of concept work to be undertaken which can help users migrate to national facilities.

TIER 3

Local

Smaller computing clusters based in universities.

Cloud

All tiers of HPC can be performed using cloud services such as Microsoft Azure or Amazon Web Services.
